

Task: Test the **search** feature by searching for a user based on a specific skill.  
Expected Outcome: The search results should display users who have the specified skills.

WebVoyager UI Agent

Instruction:  
Please implement a skill sharing platform for showcasing personal skills and connecting with others. The platform should allow users to create profiles, add skills and certifications, and search for other users based on their qualifications. Users should be able to browse other users' profiles, view their skills and certifications, and contact them. The platform should also have a search feature that allows users to find other users based on their skills and certifications. Apply cornsilk for the layout background and peru for interactive elements.
